

TICK-BORNE DISEASE IN CANADA A GROWING PROBLEM

Tick-Borne diseases are continuing to spread throughout North America and into Canada. IGeneX Laboratory has seen an 85% increase in testing for TBDs in Canada over the past five years, with positive cases detected in every province and in over 250 Canadian cities. Let IGeneX help you find the best diagnosis for your patients.

Locations of positive tick-borne disease cases in Canada since 2018.

POSITIVE CASES OF TICK-BORNE DISEASE

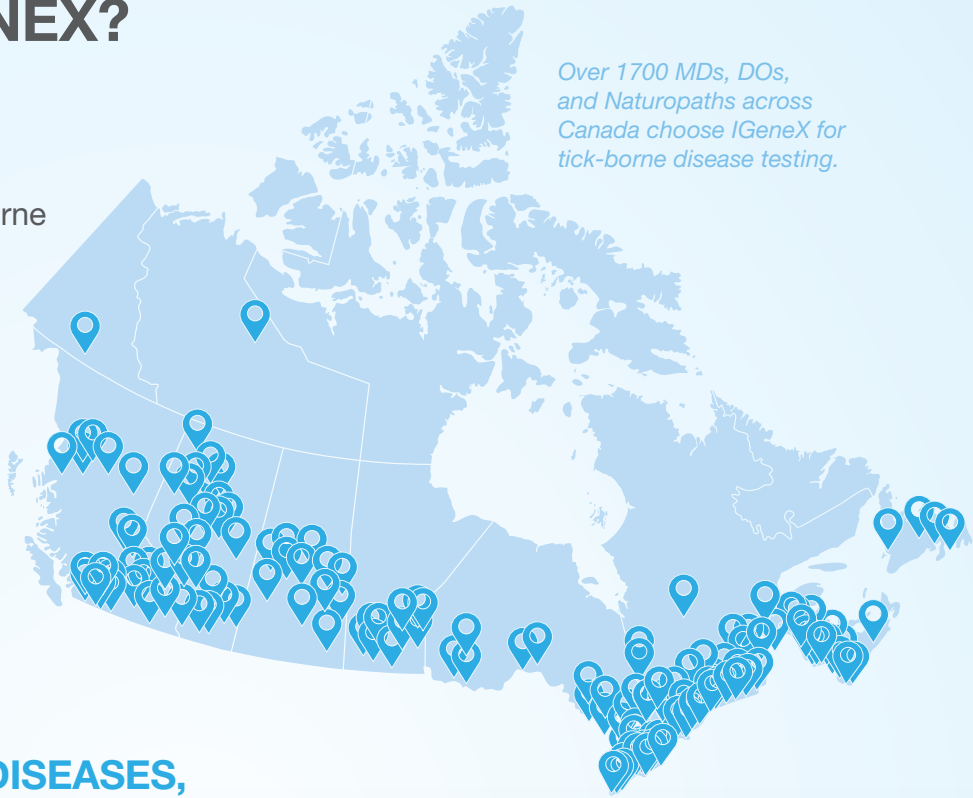

IGeneX has detected 868 positive cases from Canadian residents over the past five years.

The positives are from all of the major tick-borne illnesses, including Lyme disease, Tick-Borne Relapsing Fever (TBRF), Babesia, Bartonella, Rickettsia, Ehrlichia, and Anaplasma.

WHY CHOOSE IGENEX?
